SITUATION SUMMARY

Cal OES Activation Status

State Operations Center	Inland Region EOC	Coastal Region EOC	Southern Region EOC
Normal Operations	Normal Operations	Normal Operations	Normal Operations

CAL OES Regional Activities in Response to Statewide Warm-Up:

- The Cal OES Regions have reached out to their respective Operational Areas (OAs) and polled for their activities related to the heat forecast.
- Cal OES Regional Duty Officers will continue to monitor the situation and provide updates as warranted.

Cal OES COASTAL REGION

· Nothing significant to report.

Cal OES INLAND REGION

· Nothing significant to report.

Cal OES SOUTHERN REGION

Virulent Newcastle Disease (vND) in Chickens, Los Angeles and San Bernardino Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (vND) in chickens in Los Angeles and San Bernardino Counties.

Per the Cal OES Southern Region AREP on 06/14/18 at 0846 hours:

- CDFA and the U.S. Department of Agriculture (USDA) have scaled up their response to this incident, as more cases have been detected.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus.
- Incident Management Teams (IMTs) transitioned on 06/16/18. The IMT Red Team started on 06/17/18.

Activations

• San Bernardino OA Emergency Operations Center (EOC) is activated to Level 3 (lowest level) and will continue to monitor the incident.

Deployments

 1 Cal OES Southern Region Senior Emergency Services Coordinator (ESC) deployed to ICP as an AREP. Operational period of 0700-1900 hours.

No 911 Outages	No 911 Outages	911 Outage

911 Outages/Remote/Community Isolations:

Network Outage, Placentia, Orange County

On 06/19/18 at 1807 hours, CA 911 Branch advised the California State Warning Center (CSWC) that Placentia Police Department (PD) in Orange County is in alternate answer to Brea PD due to an AT&T network outage affecting all 911 lines at Placentia PD.

- The outage began on 06/19/18 at 1400 hours.
- AT&T has both fiber and copper cable damage that was caused by construction boring.
- AT&T crew is onsite splicing in new fiber pairs that are pre-existing to bypass the section that was cut.
- AT&T crew is onsite replacing a 2,100 ft. section of copper cable consisting of 2,700 cable pairs.
- Estimated time of restoral is 06/21/18 between 0600 and 1200 hours.
- CA 911 Branch is monitoring and will provide updates when further information is received.

Service Interruptions:

None reported.

WEATHER OF CONCERN

Weather of Concern

Northern California: An Excessive Heat Watch is in effect for much of the Northern California inland region beginning Friday through Sunday.

Central California: High temperatures will be above the century mark over much of the San Joaquin Valley, lower foothills and the Kern County desert during this period, making it the longest stretch of triple digit heat so far this year.

Bay Area: Triple digit temperatures are possible Friday into Saturday, with Saturday being the warmest day at mid 90s to low 100 degrees, The Metropolitan area will receive some relief on Sunday. Northern East Bay and southern San Benito County to the far North Bay will stay the same.

Southern California:

- Excessive Heat Warnings have been issued for several counties today through Friday.
- High temperatures for Thursday and Friday across the valleys, deserts and lower mountain elevations of southwestern California are expected
 to reach the 90s to low 100s. These hot temperatures will result in Moderate Heat Risk to many areas, with locally High Heat Risk in some
 lower mountain elevations and across portions of the Antelope Valley.

Operational Area Contingency Actions

• Please see attached for Cal OES Inland and Southern Region OA's Heat Contingency Actions.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

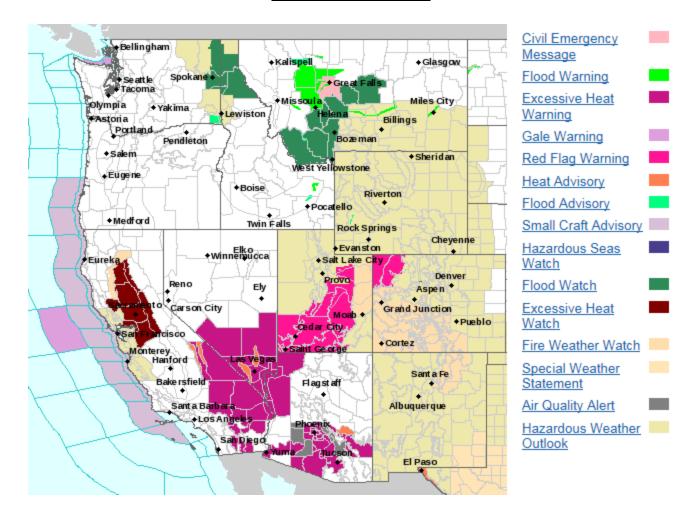

Thunderstorm chances look to be nil today with a lighter wind flow. The heat will build starting Friday and last through the weekend with above to well above normal temperatures most areas. The main feature to watch would be a dry cold frontal passage attached to an inside slider system Friday night through Saturday night. The models have bounced around quite a bit with their solution on this system but expect some gusty N-NE winds and low relative humidity (RH) within the Sacramento Valley/Foothills westward to portions of the coast. A more prominent cool down would affect the Far Eastside. A high risk wind/low RH event may need to be issued for the Sacramento Valley but have held off due to model uncertainty. Models have been a little more consistent with breaking down the ridge early next week due to a Pacific trough passage to the north. The strength of the trough passage is in question but expect increasing W-SW winds during this period with moderating temperatures but remaining above normal. Thunderstorms across the far north is not likely at this time due to the break down.

SOUTHERN CALIFORNIA

Today and Friday look to be the warmest days before a trough over the Pacific Northwest generates light onshore flow, bringing slight cooling to areas south of Pt. Conception over the weekend. The valleys and foothills of Southern California will see readings in the upper 90s later this week before temperatures drop a bit Saturday. However, the San Joaquin Valley will still see highs in the 100-105 degree range well into next week. No strong winds or convection is expected through the end of the month.
